CAS Auto, a successful B2B automotive sales organization that sells internationally, is going through a digital transformation and building an in-house technology team from the ground up. We are looking to hire an important technology leader as our first Sr. Software Engineer. This is a high-growth opportunity to join a startup-like team backed by the success of our 35-year-old business. You will play a critical role in helping to elevate the company into a modern digital product and technology driven team.

As an early team member, you will be able to make a significant impact on our technical strategies, approach, and methodologies. This is the perfect opportunity for an entrepreneurial minded engineer who is looking to make a direct impact on the future success of our business.

Sr. Software Engineer - Job Description

We are looking for a Sr. Full Stack Software Engineer to produce scalable software solutions. You'll be part of a cross-functional team that's responsible for the full software development life cycle, from conception to deployment.

As a Sr. Software Engineer, you should be comfortable around both frontend and backend coding languages, development frameworks and third-party libraries. You should also be a team player with a knack for visual design, utility, and agile methodologies.

Responsibilities:

- Work with development teams and product manager to ideate software solutions.
- Design client-side and server-side architecture
- Build the frontend of applications through appealing visual design.
- Develop and manage well-functioning databases and applications.
- Write effective APIs.
- Test software to ensure responsiveness and efficiency.
- Troubleshoot, debug and upgrade software.
- Create security and data protection settings.
- Build features and applications with a mobile responsive design.
- Write technical documentation.

- Collaborate with co-workers across the organization to improve software.

Requirements:

- Proven experience as a Sr. Software Engineer or similar role
- Experience developing web and mobile applications.
- Familiarity with common stacks
- Knowledge of multiple frontend languages and JavaScript frameworks/ libraries, (e.g. HTML, CSS, XML, TypeScript, React, React Native, Next.js)
- Strong experience with API development and integration (e.g., GraphQL, REST)
- Knowledge of multiple backend languages (e.g. Node, Python, C#)
- Familiarity with databases (e.g., MySQL, MongoDB, PostgreSQL), web servers (e.g. Apache, Amazon AWS) and UI/UX design
- Excellent communication and teamwork skills
- Great attention to detail
- Organizational skills
- Data-driven with an analytical mind
